**PhD Thesis Title:**

Multitasking, Cognitive Coordination and Cognitive Shifts During Web Searching

**Supervisors:**

Professor Amanda Spink (Principal)

Dr. Dian Tjondronegoro (Associate)

**Citation:**

*This thesis reports a very important and interesting investigation on quite a difficult area of research, namely how humans cognitively coordinate Web searches when multitasking across different search topics. Taking a detailed, qualitative approach and using several data gathering and analytic techniques, the thesis develops a cognitive model of Web search. The model covers theoretical grounds and is very useful in understanding the complexity of Web search.*
